

What is an ELDAC toolkit?

Toolkits are a collection of information, resources and tools around a particular topic or practice area. They can help users to develop a plan and organise their efforts to follow evidence-based recommendations or practices.

The ELDAC toolkits each look at an important area dealing with palliative care or advance care planning in aged care. They provide a pathway for users to access meaningful and practical materials they can use when providing care to older Australians.

ELDAC's toolkits include:

Primary Care Toolkit

Home Care Toolkit

Residential Aged Care Toolkit

End of Life Law Toolkit

Linkages Toolkit
